CONTENTS

What this guide covers

1. Accounting workspace purpose
2. Screen map and key areas
3. Core concepts and vocabulary
4. Command bar and month filters
5. KPI strip and what each number means
6. Daily entry form overview
7. Expense Paid workflow
8. Bill Received workflow
9. Pay Bill workflow
10. Transfer workflow
11. Manual Money In workflow
12. Receipt and reference rules
13. Bills Queue
14. Transaction Ledger
15. Summary, insights, and review queue
16. Export, month-end close, and troubleshooting

1. PURPOSE

What the Accounting workspace is for

The Accounting workspace is the operational finance screen inside the Executive Dashboard. It is designed for daily cash control: entering money out, entering bills before they are paid, paying saved bills, recording transfers between accounts, and logging non-marketplace money in.

The screen is intentionally separate from marketplace sales and wallet automation. Marketplace orders and wallet payouts are already tracked elsewhere. Accounting is where the team records manual finance events that would otherwise be missing from cash control.

Important rule: Do not record Shopee, TikTok, or Tokopedia sales as Manual Money In. Marketplace sales are already counted from Orders and Wallet. Use **Transfer** when marketplace money moves from a wallet into a bank account.

Use Accounting for

Daily operator entries

- Packaging purchases paid today.
- Ad payments already charged.
- Courier or fulfillment expenses.
- Offline customer payments.
- Owner injections and reimbursements.

Finance control

- Supplier bills that are not paid yet.
- Partial bill payments.
- Bank to cash transfers.
- Marketplace wallet to bank transfers.
- Receipt and data-quality review.

Desktop overview with sample data. The live dashboard will show your actual accounts, categories, bills, and transactions.

Main areas of the screen

The Accounting screen is organized from daily control at the top to review and reporting lower on the page.

Top area: command bar, period controls, action buttons, status, alerts, and KPI cards.

Command bar

Controls the reporting month, date range, refresh, export, and entry mode shortcuts.

KPI cards

Show cash, marketplace receivables, bills due, expenses, safe cash, and review count.

Daily entry

The main form for entering expenses, bills, payments, transfers, and manual income.

Bills Queue

Open supplier bills, due dates, paid amount, outstanding amount, and bill actions.

Ledger

Manual transaction history for the selected period.

Review and insights

Spend splits, monthly summary, and issues that need cleanup.

Mobile layout

On small screens, the same controls stack vertically. The workflow is identical, but tables may require horizontal scrolling.

Terms you need to understand

CONCEPT	MEANING	EXAMPLE
Real Cash Available	Money currently available in spendable bank or cash accounts.	BCA Operating + Cash Drawer.
Marketplace Outstanding	Marketplace money expected but not treated as spendable bank cash yet.	Shopee wallet balance waiting for payout.
Bill	An obligation we owe but may not have paid yet.	Supplier invoice due July 14.
Expense	Money that already left the business.	Paid ads charged today.
Transfer	Money moved between accounts. It is not income or expense.	Shopee Wallet -> BCA Operating.
Manual Money In	Non-marketplace money entering the business manually.	Offline customer payment or owner injection.
Receipt Status	Evidence state for the transaction or bill.	Missing, Attached, or Not required.
Review Queue	Data-quality checks that need cleanup.	Missing receipt, duplicate, overdue bill.

Operating principle: Each money movement should be entered once, with the clearest available account, category, vendor/source, brand, channel, and receipt status. Clean entries make cash reports useful.

Filtering, refreshing, and starting work

The command bar controls what period you are looking at and gives quick entry shortcuts.

Command bar with month selector, range buttons, date inputs, actions, status, and alerts.

Month and range controls

CONTROL	USE IT WHEN	WHAT HAPPENS
Month	You want the default monthly accounting view.	The KPI cards, bills, ledger, and summary load for that month.
This Month	You are entering or reviewing current-period activity.	Uses the current month.
Last Month	You are checking the previous close.	Loads the previous calendar month.
YTD	You need year-to-date context.	Loads data from January 1 through the selected period.
Custom	You need a specific date window.	Uses the From and To fields.

Action buttons

- **Refresh:** reloads the latest Accounting data.
- **Expense:** switches the form to Expense Paid.

- **Bill:** switches the form to Bill Received.
- **Pay Bill:** switches the form to pay an existing open bill.
- **Transfer:** switches the form to internal movement between accounts.
- **Export:** downloads the current period as CSV.
- **Settings:** currently shows read-only seeded configuration information.

Reading the top numbers

The KPI cards provide the daily finance snapshot. They should be checked before entering new data and again after posting large transactions.

KPI	WHAT IT TELLS YOU	HOW TO USE IT
Cash Available	Spendable cash and bank balance.	Use it to decide whether bills can be paid now.
Marketplace	Expected marketplace money not treated as spendable cash yet.	Do not spend this until payout is transferred.
Bills Due	Open bills due soon.	Review this daily to prevent overdue invoices.
Overdue	Bills past due.	Act immediately: pay, schedule, investigate, or void.
Expenses	Paid expenses in the selected period.	Watch sudden increases by checking Insights.
Safe Cash	Estimated cash after known obligations.	Use as a conservative spending indicator.
Review	Open data-quality issues.	Keep this close to zero before month close.

DUE DATE	STATUS	VENDOR	BILL NO.	CATEGORY	BRAND	CHANNEL	TOTAL	PAID	OUTSTANDING	AOI
2026-07-08 2026-07-01	Overdue	PT Bahan Pangan Nusantara	INV-RICE-0712	Production Material	Jenang Gemi	Production	Rp4.250.000	Rp0	Rp4.250.000	5d
2026-07-14										

Daily entry form. Mode buttons change which fields are required.

The Daily Entry form changes based on the selected mode. This keeps the form shorter and reduces mistakes. The most important required fields are amount, date, account, category, and vendor/source when applicable.

Shared fields

FIELD	HOW TO FILL IT	WHY IT MATTERS
Date	Use the date money moved or the bill was issued.	Controls monthly reporting.
Amount	Enter the gross amount in Rupiah.	Feeds cash movement and summaries.
Account	Choose the account money came from or entered into.	Keeps cash balances correct.
Category	Choose the best matching finance category.	Drives spend split and review quality.
Vendor / Source	Enter the vendor, payee, customer, owner, or money source.	Supports vendor reports and duplicate checks.
Brand	Select the brand that owns the activity.	Separates ZERO, Jenang Gemi, shared costs, and others.
Channel	Select operational channel.	Separates Shopee, TikTok, offline, ads, production, and internal activity.
Receipt URL	Paste an invoice or receipt link if available.	Reduces review work later.
Receipt Status	Choose Missing, Attached, or Not required.	Feeds review queue checks.
Reference No.	Enter invoice, bank, or payment reference.	Helps reconcile bank statements.
Order / SKU	Use when an expense relates to an order or SKU.	Improves traceability.
Notes	Add concise context.	Helps future reviewers understand unusual entries.

Save buttons

- **Save:** posts the entry and refreshes the workspace.
- **Save & Add:** posts the entry and keeps you in entry mode for the next similar item.
- **Draft:** saves an entry that still needs confirmation.
- **Cancel:** resets the form.

How to record each type of activity

Expense Paid

Use Expense Paid when money has already left the business. This is the most common daily entry mode.

- 1 Select **Expense Paid**.
- 2 Enter the payment date and amount.
- 3 Choose the account that paid the expense.
- 4 Choose category, vendor/payee, brand, and channel.
- 5 Attach receipt URL or set Receipt Status correctly.
- 6 Click **Save** or **Save & Add**.

Example: Cash Drawer paid Rp275.000 to a courier for fulfillment. Category = Logistics, Channel = Fulfillment, Receipt Status = Attached.

Bill Received

Use Bill Received when you receive a supplier invoice but have not fully paid it yet. This creates a bill in the Bills Queue.

- 1 Select **Bill Received**.
- 2 Enter Bill Date, Due Date, and Amount.
- 3 Enter the vendor and bill/invoice number.
- 4 Choose category, brand, and channel.
- 5 Attach invoice URL if available.
- 6 Click **Save**. The bill appears in Open Bills.

Pay Bill

Use Pay Bill when paying a bill that already exists in the Bills Queue. This reduces the outstanding amount and creates a payment transaction.

- 1 Select **Pay Bill**, or click Pay from the bill row.

- 2 Choose the bill. The amount fills from the outstanding amount when available.
- 3 Choose the account that paid the bill.
- 4 Adjust amount if it is a partial payment.
- 5 Add receipt/reference details and Save.

Do not enter a paid supplier invoice twice. If the invoice already exists as a bill, use Pay Bill. If you enter it as a new Expense Paid too, expenses and cash movement will be overstated.

Recording movement without double-counting

Transfer

Use Transfer for wallet payout, bank-to-bank transfer, cash deposit, or any movement between accounts. Transfers do not count as income or expense.

- 1 Select **Transfer**.
- 2 Enter date and amount.
- 3 Choose From Account and To Account.
- 4 If there is a bank fee, enter Transfer Fee.
- 5 Save.

Marketplace payout example: Shopee Wallet -> BCA Operating for Rp12.750.000. This is a Transfer because the sale was already captured by Orders/Wallet.

Manual Money In

Use Manual Money In only for non-marketplace money. Examples include owner injection, offline customer payment, manual invoice payment, refund, reimbursement, loan received, or other non-marketplace income.

- 1 Select **Money In**.
- 2 Choose Income Type.
- 3 Choose Received Into Account.
- 4 Enter source/customer and category.
- 5 Save after confirming this is not marketplace revenue.

Do

- Use Transfer for marketplace wallet payout.
- Use Manual Money In for offline customer payment.
- Use Owner Injection for owner capital added to bank.

Do not

- Do not enter Shopee order revenue manually.
- Do not use Manual Money In to clean up wallet balances.
- Do not skip the source field.

Bills Queue with due date, status, vendor, amount, outstanding balance, receipt status, and actions.

Bill statuses

STATUS	MEANING	ACTION
Unpaid	No payment recorded yet.	Pay when scheduled.
Partially paid	Some payment has been recorded but balance remains.	Pay remaining outstanding amount.
Overdue	Due date is past and outstanding remains.	Escalate and resolve quickly.
Paid	Outstanding amount is zero.	No action required unless receipt/reference is missing.
Void	Bill was cancelled with a reason.	Keep for audit trail; do not reuse.

Bill row actions

- **Pay:** switches the form into Pay Bill mode and selects that bill.
- **View:** opens a detail drawer with raw bill fields.
- **Void:** cancels the bill after you enter a reason. Use this only when the bill is invalid or duplicated.

Reading manual transaction history

Transaction Ledger with date, type, account, direction, vendor/source, category, amount, status, receipt, and actions.

What to review in the ledger

- **Date:** confirm it belongs to the selected period.
- **Type:** expense, transfer, manual income, owner injection, refund, or draft.
- **Direction:** money out, money in, or internal transfer.
- **Account:** confirm the correct bank/cash/wallet account was used.
- **Vendor / Payee:** confirm the source or recipient is meaningful.
- **Receipt:** missing receipts should be resolved before closing.
- **Related Bill:** bill payments should point to the bill number when possible.

Voiding a transaction

Voiding is used instead of deletion so the audit trail remains intact. Use Void only when an entry is wrong, duplicated, or should not count. Always enter a short reason that a reviewer can understand later.

Using reporting sections

Summary

The Summary section gives profit context and cash movement context for the selected period. It helps compare operational cash movement against broader sales and gross profit context.

Insights

Insights group spending by category, vendor, brand, or channel. Use the tabs to answer questions such as:

- Which category consumed the most cash this month?
- Which vendor drove the largest expense?
- Which brand is carrying shared costs?
- Which channel is generating the most operational spending?

Cleaning data before month close

The Review Queue identifies records that need cleanup. A clean Review count is a good signal that the period can be exported and sent for finance review.

ISSUE	WHAT IT MEANS	HOW TO RESOLVE
Missing receipt	Receipt Status is Missing or no receipt URL exists.	Attach a link or mark Not required with a good reason.
Overdue bill	A bill is past due and still outstanding.	Pay, schedule, investigate, or void if invalid.
Missing category	Entry does not have a useful category.	Edit/update with the correct category.
Marketplace income risk	Manual Money In looks like marketplace revenue.	Void if duplicated, or re-enter as Transfer if it was a payout.
Duplicate risk	Similar amount/vendor/date already exists.	Confirm which entry is correct and void duplicates.

Review routine

1. Open the selected month.
2. Check the Review KPI count.
3. Open Review Queue and resolve each issue.
4. Refresh and confirm the Review KPI dropped.
5. Export only after critical issues are resolved.

Preparing data for finance review

Use Export when you need a CSV of manual accounting transactions for the selected month or custom range. The export is intended for reconciliation, review, or handoff to the person preparing final accounting records.

Export steps

- 1 Select the month or custom period.
- 2 Click **Refresh** so the screen is current.
- 3 Resolve critical review items and missing receipt items.
- 4 Click **Export**.
- 5 Open the CSV and compare against bank statements, cash counts, wallet payout history, and supplier invoices.

Monthly close checklist

- All known supplier invoices are entered as bills.
- All paid bills are marked paid or partially paid.
- All daily expenses have category, vendor, brand, and channel.
- Marketplace payouts are transfers, not manual income.
- Offline/manual income has source and reference.
- Receipt status is accurate for every material entry.
- Overdue bills are explained or resolved.
- Review Queue has no critical items.
- Safe Cash is reviewed before discretionary spending.
- CSV export is saved for the period.

Rules that keep Accounting usable

Enter daily, not weekly

Daily entry reduces forgotten vendors, missing receipts, and incorrect dates.

Use bills for unpaid invoices

If we owe money but have not paid, create a bill. Do not wait until payment day.

Do not double-count payouts

Marketplace payout is a transfer from wallet to bank, not new revenue.

Attach evidence early

Missing receipts create review work and slow month close.

Void, do not delete

Voiding keeps a reason and preserves audit history.

Keep categories boring

Use consistent categories. Do not create vague vendor names or broad catch-all notes.

Common mistakes

MISTAKE	RESULT	CORRECT APPROACH
Entering marketplace payout as Manual Money In	Revenue/cash is double-counted.	Use Transfer from marketplace wallet to bank.
Entering unpaid invoice as Expense Paid	Cash looks lower before payment happens.	Use Bill Received, then Pay Bill later.
Skipping vendor/source	Insights become useless.	Enter the vendor, payee, source, or customer.
Leaving receipt missing	Review Queue stays open.	Attach URL or mark Not required.
Using wrong date	Month totals become inaccurate.	Use actual movement date or invoice date.

When something looks wrong

PROBLEM	LIKELY CAUSE	WHAT TO DO
Numbers did not update after saving	Data has not refreshed yet.	Click Refresh and check selected month.
Bill does not appear in Pay Bill	Bill may already be paid/voided or filtered out.	Check Bills Queue status and selected month.
Amount is not accepted	Amount is blank or zero.	Enter a positive Rupiah amount.
Transfer form rejects entry	From and To accounts are the same or missing.	Choose two different accounts.
Manual income warning appears	The source/channel looks like marketplace revenue.	Use Transfer if this is a payout.
Export is missing rows	Wrong month/range selected.	Select the correct month or custom range before export.

Escalate when

- Cash Available does not match the bank/cash reality after refresh.
- Marketplace Outstanding looks materially wrong.
- Safe Cash is negative or unexpectedly low.
- Overdue bills are growing.
- Review Queue contains items you cannot resolve confidently.

End of tutorial. Keep this PDF near the finance SOP and update it when Accounting workflows or fields change.
